Zencore Migration Assessment

Proven methodology crafted by seasoned Google Cloud practitioners.

The Migration Assessment is a valuable resource for companies currently operating workloads on AWS, Azure, or on-premises environments.

Zencore's Migration Assessment is a fixed-cost engagement that provides insights into how an existing client platform or application would function within Google Cloud. Included are an outline of the advantages of migrating workloads and a detailed migration roadmap.

The assessment runs over a four-week timeframe, uses a comprehensive framework of cloud management practices that help to benchmark capabilities, identify strengths and gaps, and leverage modern tools and technologies to de-risk a potential migration and accelerate that process.

What are the Benefits?

Google Cloud has best-in-class technologies like GKE, Cloud Run, BigQuery and Vertex AI. Moving to this cloud environment can significantly reduce costs, drive operational efficiency and improve developer productivity. Our migration assessment will provide a comprehensive blueprint of your existing infrastructure, the possible future state hosted on Google Cloud, and a well-structured strategy for your migration. This empowers you to make an educated choice regarding your cloud migration approach.

What is Delivered?

Zencore will produce a detailed report including;

- **An evaluation** of your existing environments and architectures. Zencore will categorize your applications and services based on their respective archetypes and migration priorities.
- **A recommended roadmap and target state** for what those workloads would look like on Google Cloud. Including Total Cost of Ownership (TCO) benefits, the adoption of modern tools and methodologies, enhanced operational efficiency, and potential optimization opportunities.
- **A migration blueprint** for effectively moving the cataloged applications and services to Google Cloud. This plan will encompass a migration sequence, detailed methodologies, necessary technical adjustments, as well as estimations for the effort involved and the timeline.
